

Precision Builder

PrecisionBuilder was developed as an integral part of the HomeFront Suite, which offers the home builder a complete sales, construction & service management system in one integrated solution.

ESTIMATING, PURCHASING AND PRICEBOOK

PrecisionBuilder's estimating tools empowers you, the home builder, with a fast and efficient way to build, price and manage your model and option price books, respond to custom option price requests or estimate a custom home. **PrecisionBuilder** is the first product on the market to allow model and option pricing based on up to 12 forecasted cost periods.

PrecisionBuilder offers a complete "sales to estimating to purchasing process solution." Approved contracts and Change Orders update the budget and "queues up" PO's for review to be sent to the affected trades.

PrecisionBuilder offers several significant benefits for builders including:

- Shortened implementation:
 1. Use familiar tools such as Excel to build up your price book and then simply import it into Precision Builder.
 2. Build your price book and vendor pricing catalogue as you go by saving work you have done for a job as a model or option. You can also save any vendor quotes from a job to the vendor pricing catalogue.
- Real-time Budget and quick creation of PO's based on approved Contracts and Change Orders from Sales
- A diverse Estimating tool kit with:
 1. Comprehensive Assembly Take-off
 2. Copy function from other Jobs and Proposals
 3. Auto retrieve measurements from On-Screen Take-Off
 4. Import from Excel or other Estimating packages

Integration With Popular Accounting Software

Integrates with some of the most widely-used accounting software applications including:

- Sage Timberline Office
- Sage Master Builder
- QuickBooks
- Simply Accounting by Sage

- Trade specific PO formats, defaults and document attachment rules.
- Initiate Field and Variance PO's on any handheld device directly from the field.
- Area and Phase specific Sales and Vendor Pricing, this is an optional feature.
- Standard Substitution for Area specific substitution of items.
- Document Management; Organize your Job Documents internally and share online with trades and customers.
- Wizard for Work reassignment from one trade to another.
- Wizard for mass changes to models and options such as item replacements, additions or substitutions.

PrecisionBuilder is the intelligent management solution for Production and Custom builders. Many software products are tailored toward the larger production builder but do not respond to the custom builder's need to make frequent changes. **PrecisionBuilder** offers the ability to do a take off, apply mark-up, and incorporate it immediately into a customer option or change order.
